For the substances that have increased in quantity, the numbers have been fueled by customer demand, and do not reflect any conscious effort from Sun to increase usage. The substances that show decreased values are driven, in part, by reduction efforts, such as continuous training of our employees, but is mainly driven by customer request and the current business market. At this time, no suitable substitutions can be made that will improve or maintain the performance and quality of the reportable substances.

Sun Chemical's Intent and Objectives

Changes have been made to increase the efficiency of our procedures to reach target goals. Procedures have also been reviewed to reduce emissions in routine maintenance as well as daily operations.

There are no recommended improvements to our equipment to aid reduction efforts as none are cost effective at this time. Suggested improvements will be revisited in future years to re-evaluate the feasibility of these projects.

Sun Chemical is committed to our long-term goal of reducing toxic substances. We are constantly looking for new ways to reduce toxic substances while improving product performance and quality, not only for ourselves, but also for our customers. Because products are constantly changing and evolving to keep up with new innovations, our reduction plans are continually reviewed to ensure we keep sustainable development a priority.

To meet these goals, employees perform periodic training on the proper use of the equipment as well as take reasonable measures to prevent any emissions that can be reduced or stopped. Emissions are determined by customer demand and the current business market and we cannot place accurate estimates or timelines on the reduction quantities.

Statement of Certification by Highest Ranking Employee

As of September 30, 2019, I, Rod Staveley, certify that I have read the toxic substance reduction plan for the toxic substances referred to below and am familiar with its contents, and to my knowledge the plan is factually accurate and, with the exception of meeting the regulatory deadline, complies with the *Toxics Reduction Act, 2009* and Ontario Regulation 455/09 (General) made under that act.
