Ethyl alcohol	64-17-5

For the 2015 reporting year, Sun Chemical's usage of Copper and its compounds (NA-06) has been removed as we no longer meet the criteria required for reporting.

Sun Chemical Limited manufactures printing ink for a variety of applications and customers. The seven reported substances above are used in creating specific properties in inks to meet customer product requirements.

Tables 1 to 3 below summarize the quantities reportable and targeted by Sun Chemical for reduction, wherever feasible.

For the substances that show an increase in the quantity this is due to the customer demand and we cannot place accurate future estimates or time lines on the reduction quantities.

The reduction efforts of employees in addition to corporate decision have brought our total copper emissions below the reporting threshold.

Sun Chemical's Intent and Objectives

Changes have been made to increase the efficiency of our procedures to reach target goals. Procedures have also been reviewed to reduce emissions in routine maintenance as well as daily operations.

There are no recommended improvements to our equipment to aid reduction efforts as none are cost effective at this time. Suggested improvements will be revisited in future years to re-evaluate the feasibility of these projects.

Sun Chemical is committed to our long-term goal of reducing toxic substances. We are constantly looking for new ways to reduce toxic substances while improving product performance and quality, not only for ourselves, but also for our customers. Because products are constantly changing and evolving to keep up with new innovations, our reduction plans are continually reviewed to ensure we keep sustainable development a priority.

To meet these goals, employees perform periodic training on the proper use of the equipment as well as take reasonable measures to prevent any emissions that can be reduced or stopped. Emissions are determined by current and future customer demand and we cannot place accurate estimates or timelines on the reduction quantities.

In this reported calendar year, the reduction efforts of employees in addition to corporate decisions have brought our total copper emissions below the reporting threshold.
